

Silent Air System for point-of-use drying with oil-free compressed air

DÜRR
TECHNIK

Soundproofed SAS compressor unit

In many applications around the laboratory and in various manufacturing and installation processes, some manual preparation is of key importance. From blowing off dust particles to drying up water droplets from optics and other components and expedite their use and reuse in a particular application, are just some of the possibilities.* Unfortunately the growing demand for compressed air many times cannot be satisfied by the facility due to cost, approvals or when frequent relocation of the air source is needed. Our Silent Air System offers a suitable and effective solution.

Your benefits:

- extremely low noise level with soundproofed enclosure
- easy to handle
- "plug-and-play" oil-free compressor system
- built-in pressure regulator for quick adjustment
- fine filter to supply high quality air
- maintenance-free compressor
- durable enclosure that cleans easily
- the SAS is designed to be versatile, and can be used in various other applications by exchanging attachments

Thanks for the exceptionally compact design, the SAS may even fit into an existing cabinet to save valuable space in the room. A carrying handle is built into the enclosure to facilitate easy relocation. The SAS for Point-Of-Use undusting and drying applications is equipped with a fine filter and an air gun with hose, as standard accessories. An optional nozzle kit is available to accommodate a wide array of applications.

Nozzle kit for SAS system for various drying, undusting and other applications

*Note : Customer is responsible for regulatory compliance, and assuring proper method and equipment validation is conducted when using this equipment.
